

Sanjay S M

Artificial Intelligence Engineer

itssanjaysm@gmail.com · +91-84319 42404 · Bengaluru · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Enthusiastic Artificial Intelligence & Machine Learning graduate with a strong foundation in data analysis, machine learning algorithms, and software development. Adept at building intelligent systems and robust software solutions that drive efficiency and innovation. Seeking to contribute expertise in AI technologies and software engineering within a forward-thinking organisation to deliver impactful, real-world applications.

PROFESSIONAL EXPERIENCE

AI Engineer

Jul 2025 – Present

UPRIO

- Contribute as a junior AI engineer engaged in AI initiatives, driving product innovation.
- Developed and implemented software applications, enhancing company productivity and client satisfaction.

AI Developer Level 1

Jun 2024 – Jun 2025

AT&T

- Actively contributed to building and improving enterprise-grade applications.
- Collaborated on key projects while continuously expanding technical knowledge and hands-on engineering experience.

Trainee – Development Team

Sep 2023

Otomeyt | An Apar Entity

- Contributed to active development projects at a Singapore-based AI company.
- Gained cross-functional exposure to multiple programming languages and corporate engineering practices.

EDUCATION

BE – Artificial Intelligence & Machine Learning Engineering

2020 – 2024

Mangalore Institute of Technology & Engineering, Moodbidri

CGPA: 8.2

Senior Secondary (Pre-University)

2018 – 2020

RNS PU College, Bengaluru, Karnataka

79.68%

Secondary School – CBSE

2006 – 2018

Vishwa Venkateshwara International School, Bengaluru

88%

TECHNICAL COMPETENCIES

Programming Languages

Python, JavaScript

Web Technologies

HTML, CSS

Databases

SQL, MySQL, MongoDB

Frameworks

MERN Stack (Foundational)

AI / Machine Learning

Machine Learning, Deep Learning, Neural Networks, TensorFlow, PyTorch, NLP

Development Tools

Visual Studio Code, Solid Edge, MATLAB

Professional Skills

Teamwork, Time Management, Problem-Solving, Analytical Thinking, Software Development

KEY PROJECTS

AI Document Search — Retrieval-Augmented Generation (RAG) Chatbot

[React](#) · [FastAPI](#) · [Python](#) · [Google Gemini](#) · [LangChain](#) · [Pinecone](#) / [FAISS](#)

Architected an intelligent document search system enabling users to converse with PDF documents using LLMs and semantic search. Leveraged Google Gemini API for natural language understanding with RAG pipelines to deliver accurate, context-aware responses. Features a modern dark-themed UI with vector database integration. Deployed on Vercel and Docker.

Suicide Rate Prediction using Machine Learning

[Python](#) · [Scikit-learn](#) · [Machine Learning](#)

Developed an ML-based predictive system for proactive suicide rate estimation with a strong emphasis on ethical AI practices. Integrated diverse datasets encompassing demographic, socioeconomic, and mental health indicators to identify at-risk patterns and support early intervention strategies.

AI-Driven Estimation of Medical Leaf Characteristics (Sep 2023 – Jan 2024)

[Python](#) · [TensorFlow](#) · [OpenCV](#) · [VGG16](#) · [Random Forest](#)

Utilised advanced AI techniques to precisely identify and analyse medicinal leaf characteristics, intersecting botany, healthcare, and AI. Integrated geolocation data and disease detection capabilities for informed decision-making across agricultural and medical domains.

Driver Drowsiness Detection System (Jun 2023)

[MATLAB](#) · [Computer Vision](#) · [Fuzzy Logic](#)

Designed a real-time driver drowsiness detection system using computer vision algorithms. Detects facial landmarks from live video feeds and applies fuzzy logic to determine driver alertness and trigger safety warnings.

Exam Nerd — Online Examination Platform (Sep 2023)

[MySQL](#) · [PHP](#) · [HTML](#) · [CSS](#)

Built a comprehensive online examination system for students and educators. Administrators can create and manage assessments efficiently; the platform auto-evaluates responses and ranks students by performance.

BookMyPool — Ride-Sharing Android Application (Jan – Jun 2023)

[Android Studio](#) · [Java](#)

Developed an Android ride-sharing application that reduces carbon footprint by matching commuters travelling in the same direction, promoting sustainable urban transportation.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Meta Front-End Developer Professional Certificate — Coursera
- Programming for Everybody: Getting Started with Python — Coursera
- Supervised Machine Learning: Regression and Classification — Coursera
- Principles of UX/UI Design — Coursera

EXTRACURRICULAR ACTIVITIES & INTERESTS

- Personal coding and open-source projects
- Gaming
- Reading manga and watching anime
- Volunteering for technology-driven community initiatives
